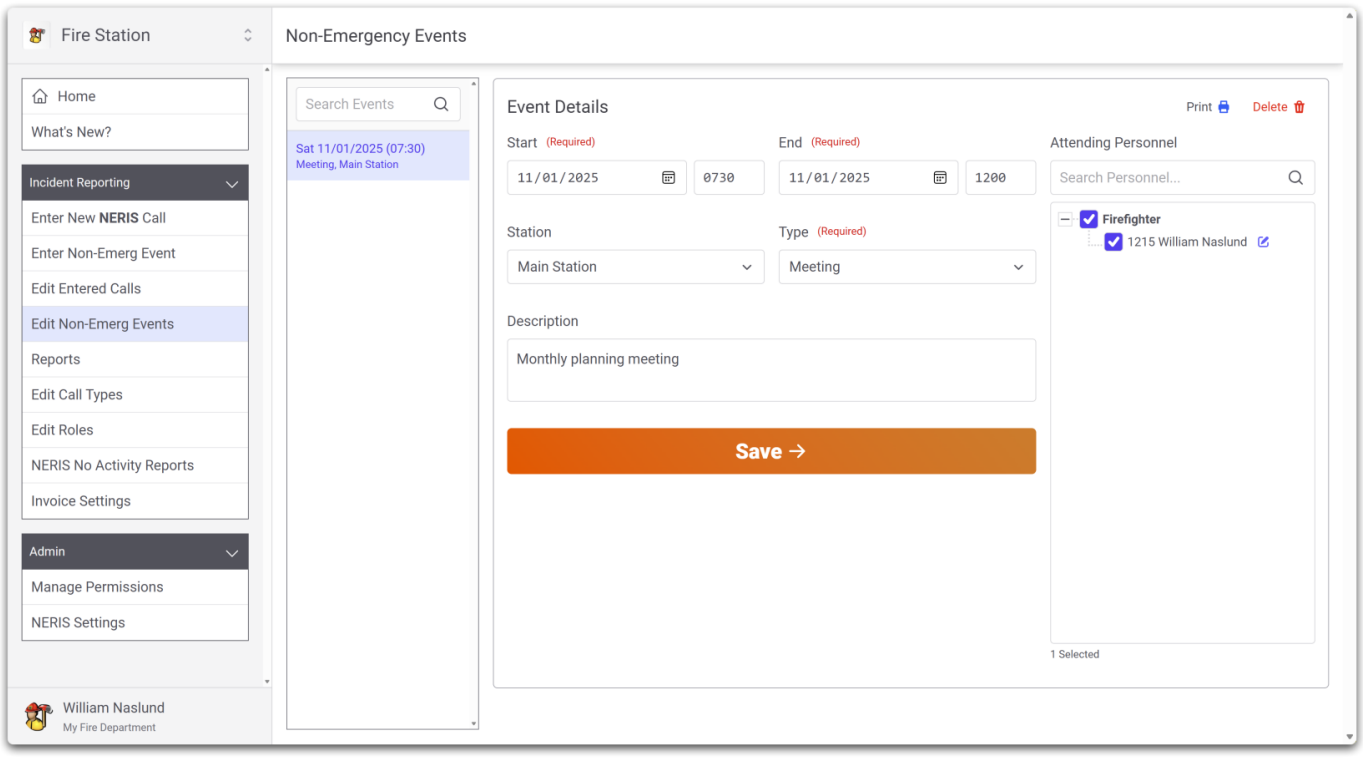
November 11th, 2025

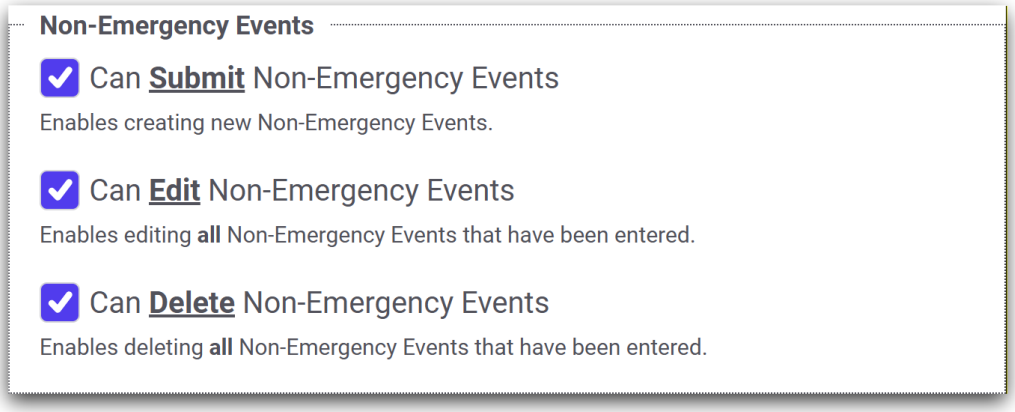
This release adds support for Non-Emergency Events in Fire Station online and includes updates to support changes made in NERIS.

Non-Emergency Events Online

Non-Emergency events may now be managed in Fire Station online. Any non-emergency events entered from the Windows application appear online, and any non-emergency events entered from Fire Station online appear in the Windows application.



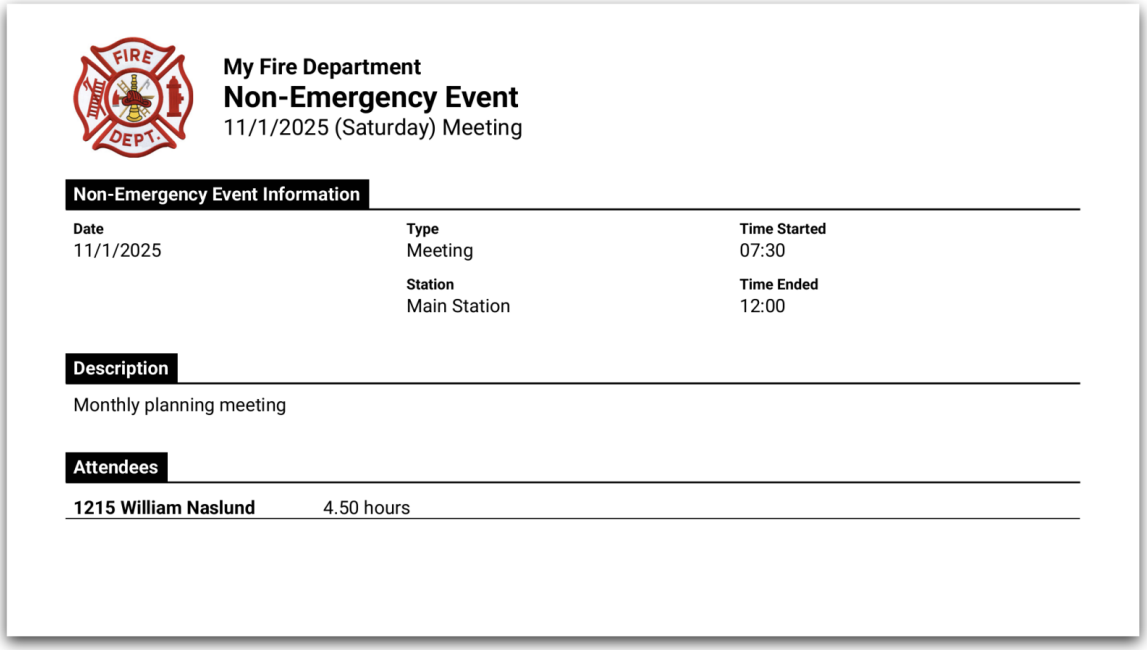
New permissions have been added in addition to the *Can Edit Non-Emergency Events* to allow more control over creating and deleting non-emergency events:



- *Can Submit Non-Emergency Events* allows someone to create new non-emergency events from Fire Station online.
- *Can Edit Non-Emergency Events* allows someone to view and edit **all** non-emergency events that have been entered.
  - Please note: In the Windows application, granting this permission allows someone to edit and delete non-emergency events as well. In Fire Station online, granting this permission only allows someone to edit non-emergency events.
- *Can Delete Non-Emergency Events* allows someone to view and delete **any** non-emergency in Fire Station online.

> Any member of your department that previously had the *Can Edit Non-Emergency Events* permission has been **automatically** granted the *Can Submit Non-Emergency Events* and *Can Delete Non-Emergency Events* permission, thus enabling all functionality of non-emergency events in Fire Station online.

Printing a non-emergency event is also available online. The styling of this report has been updated to be similar in style to printed NERIS reports, but all the same information is there as in the Windows application. It looks like this online:



My Fire Department
Non-Emergency Event
11/1/2025 (Saturday) Meeting

Non-Emergency Event Information

Date	Type	Time Started
11/1/2025	Meeting	07:30
	Station	**Time Ended**
	Main Station	12:00

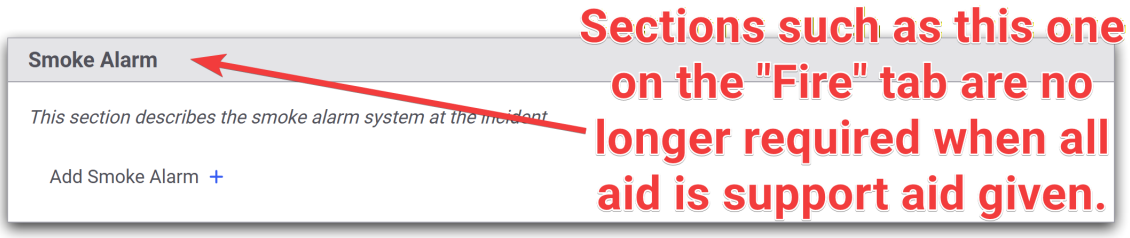
Updated Validation for Structure Fire NERIS Calls

In accordance with changes made to NERIS, when all aid on a call is *SUPPORT_AID* and the direction is *GIVEN*, if the call is a structure fire the alarm and suppression sections on the *Fire* tab are **no longer required.** Previously, as a workaround, selecting *Not Applicable* in the *Presence* field was required. Fire Station has been updated to no longer show the *Required* label on sections that aren't required after the NERIS update.



Fire Station will still show an error when validating a NERIS call for structure fires where there is no aid, or **not all the aid is support aid given.**

EMS Option for Non-FD Aid

A new option for *EMS* has been added when specifying the type of Non-FD on the NERIS *Basic* tab. This option should only be used if your department does **not** provide patient care or transport and EMS aid was received.
