December 16th, 2025

This release includes a few enhancements to the NERIS incident reporting process in *Fire Station Online*.

Updating Address from Active911 Fixed

A fix has been deployed to allow you to update the street number of addresses when importing the address from an Active911 alert.

Ampersand in Active911 Addresses

If there is an ampersand in the address of an alert imported from Active911, and the ampersand is separating two street names, the streets will be imported as cross streets in NERIS now.

Payroll Rate on Non-Emergency Events

In *Fire Station Online*, the training rate was used insted of the call rate for non-emergency events when running the payroll report. This has been corrected to match the desktop app and use the call rate for non-emergency events.
