

# November 11th, 2025

This release adds support for Non-Emergency Events in Fire Station online and includes updates to support changes made in NERIS.

## Non-Emergency Events Online

Non-Emergency events may now be managed in Fire Station online. Any non-emergency events entered from the Windows application appear online, and any non-emergency events entered from Fire Station online appear in the Windows application.

The screenshot displays the Fire Station online interface for managing Non-Emergency Events. The interface is divided into several sections:

- Header:** "Fire Station" and "Non-Emergency Events".
- Left Navigation Panel:** Contains "Home", "What's New?", "Incident Reporting" (with sub-items: Enter New NERIS Call, Enter Non-Emerg Event, Edit Entered Calls, Edit Non-Emerg Events, Reports, Edit Call Types, Edit Roles, NERIS No Activity Reports, Invoice Settings), and "Admin" (with sub-items: Manage Permissions, NERIS Settings). The user is identified as William Naslund, My Fire Department.
- Event List:** A search bar "Search Events" and a list of events. One event is highlighted: "Sat 11/01/2025 (07:30) Meeting, Main Station".
- Event Details Form:**
  - Start (Required):** 11/01/2025 0730
  - End (Required):** 11/01/2025 1200
  - Station:** Main Station
  - Type (Required):** Meeting
  - Description:** Monthly planning meeting
  - Attending Personnel:** Search Personnel... with a list containing "Firefighter" and "1215 William Naslund" (checked).
  - Buttons:** Print, Delete, and a large orange "Save →" button.
  - Footer:** "1 Selected"

New permissions have been added in addition to the *Can Edit Non-Emergency Events* to allow more control over creating and deleting non-emergency events:

### Non-Emergency Events

Can **Submit** Non-Emergency Events

Enables creating new Non-Emergency Events.

Can **Edit** Non-Emergency Events

Enables editing **all** Non-Emergency Events that have been entered.

Can **Delete** Non-Emergency Events

Enables deleting **all** Non-Emergency Events that have been entered.

- *Can Submit Non-Emergency Events* allows someone to create new non-emergency events from Fire Station online.
- *Can Edit Non-Emergency Events* allows someone to view and edit **all** non-emergency events that have been entered.
  - Please note: In the Windows application, granting this permission allows someone to edit and delete non-emergency events as well. In Fire Station online, granting this permission only allows someone to edit non-emergency events.
- *Can Delete Non-Emergency Events* allows someone to view and delete **any** non-emergency in Fire Station online.

Any member of your department that previously had the *Can Edit Non-Emergency Events* permission has been **automatically** granted the *Can Submit Non-Emergency Events* and *Can Delete Non-Emergency Events* permission, thus enabling all functionality of non-emergency events in Fire Station online.

Printing a non-emergency event is also available online. The styling of this report has been updated to be similar in style to printed NERIS reports, but all the same information is there as in the Windows application. It looks like this online:

**My Fire Department**  
**Non-Emergency Event**  
11/1/2025 (Saturday) Meeting

**Non-Emergency Event Information**

<b>Date</b> 11/1/2025	<b>Type</b> Meeting	<b>Time Started</b> 07:30
	<b>Station</b> Main Station	<b>Time Ended</b> 12:00

**Description**

Monthly planning meeting

**Attendees**

1215 William Naslund 4.50 hours

## Updated Validation for Structure Fire NERIS Calls

In accordance with changes made to NERIS, when all aid on a call is *SUPPORT\_AID* and the direction is *GIVEN*, if the call is a structure fire the alarm and suppression sections on the *Fire* tab are **no longer required**. Previously, as a workaround, selecting *Not Applicable* in the *Presence* field was required. Fire Station has been updated to no longer show the *Required* label on sections that aren't required after the NERIS update.

**Smoke Alarm**

*This section describes the smoke alarm system at the incident.*

Add Smoke Alarm +

**Sections such as this one on the "Fire" tab are no longer required when all aid is support aid given.**

Fire Station will still show an error when validating a NERIS call for structure fires where there is no aid, or **not all the aid is support aid given**.

**Error**

Value error, Incidents with a "FIRE||STRUCTURE FIRE" type require all fire suppression and alarm modules: smoke\_alarm, fire\_alarm, other\_alarm, fire\_suppression, unless all aids are "SUPPORT AID" that was "GIVEN" to another department.

## EMS Option for Non-FD Aid

A new option for *EMS* has been added when specifying the type of Non-FD on the *NERIS Basic* tab. This option should only be used if your department does **not** provide patient care or transport and EMS aid was received.

**Non-FD Aid #1**

**Non-FD Entity Type** ⓘ

Emergency Medical Services (EMS) ▼ Remove

Only select "Emergency Medical Services (EMS)" when your agency does not provide patient care or does not transport.
